

CSS Job Description – Technical – JDE CNC

CSS Company Background:

At CSS, creativity, teamwork, and loyalty are tangible principles that guide our daily actions. We have a corporate culture unlike any other firm in the business. Our turnover rates are near zero because we treat our customers and our employees with respect. If you want to be part of an elite team where excellence is a way of life, then CSS is a great fit for you.

CSS exclusively partners with Oracle with specialized practices for all Oracle Enterprise applications: Oracle E-Business Suite, JD Edwards and PeopleSoft Enterprise, across several industry segments.

CSS guiding principles, that have also given us 12 consecutive years of growth, are to:

- Bring the best talent on board and leverage those resources
- Keep the company lean, efficient and focused
- Maintain the best client service
- Treat challenges as opportunities for growth and education
- Stay current on technology certifications and Oracle Partner Programs

Purpose:

This position will focus on the setup, configuration, and management of JD Edwards EnterpriseOne applications for the CSS client base. Responsibilities include both performing typical CNC activities such as environment installation and upgrading, performance tuning, package builds, security setup, and helping clients identify and solve their most critical information and technological challenges regarding EnterpriseOne environments.

Responsibilities:

Using in-depth knowledge of the JDE product lines, as well as industry expertise, consults with clients and project personnel to determine scope of project needs.

Participates in preparation of proposals and statements of work, development of project estimates, work plans, and advises on implementation strategies in area of specialization.

Identifies and applies creative and innovative approaches to resolving product implementation and integration obstacles and problems.

Develops new or enhanced methods and techniques to resolve product line problems and offers options, alternatives, outcomes and possible implications of various courses of action.

Communicates product information and provides guidance to clients and coworkers on issues, tools and techniques, enhancements, changes in processes and related information.

Works collaboratively with consultants, implementation managers, and Corporate to develop, test, and implement products

Required Skills:

1. Education: Bachelor's Degree
2. Expert-level skill and knowledge in JDE CNC Administration, as evidenced by the following:
 - a. Minimum 5 years with installing, upgrading, and administering JDE EnterpriseOne
 - b. Minimum 2 years as JDE CNC Administrator with EnterpriseOne release 8.11 or later
 - c. Experience with the following Software
 - i. Unix, Linux, Unix/Linux shell scripting, Oracle Application Server, JDE Server Manager, Oracle Enterprise Manager, Weblogic, Oracle RDBMS
 - d. Understand high availability and disaster recovery configurations
 - e. Strong understanding of networks
 - f. Installation and package deployment in portal technologies and business services

Considerations:

Job will entail 75-100% travel.

Candidates must provide legal work authorization (US Citizen, Green Card, and EAD)
